## (54) BROADCAST TYPE REALTIME HYPER TEXT COMMUNICATION METHOD AND RECEIVER

is reproduced by using a conventional HTML browser 5.

## (57) Abstract

**PROBLEM TO BE SOLVED:** To provide the broadcast type realtime hyper text communication method and a recording device, in which a viewer selects a content of a broadcast program in more detail than that by a conventional method among broadcast programs, receives the selected program and records it.

**SOLUTION:** A main and a sub-broadcast from a broadcast station is received by a teletext radio receiver 4, and the received signal is given to a PC 5. In the sub-broadcast, information relating to a program name of the main broadcast, its content or relevant information is described in the hyper text description form accompanied by a identifier defined by the attribute of the content. An input data analysis/HTML generating section 56 of the PC 5 collates information of the sub-broadcast with preset criterion data to extract only a program of the main broadcast, in compliance with the criterion data and generates an HTML file. The program of the extracted main broadcast is compressed and stored in the HTML file. The HTML file
